

# Wire Stripping Machine

## RSM-WS-745

### Feature

- ▶ High stripping precision with 0.01mm stripping length and cutting depth accuracy.
- ▶ Various processing modes (half stripping, full stripping, multi-core stripping, multi-layer stripping) for processing different types of wire.

- ▶ The gripper and knife move horizontally to ensure that the center height is consistent when processing different wires.
- ▶ Using 90° V knife, no need to replace knives for processing of different wires, which ensure easy operation.
- ▶ All parameters can be set on HMI, and Chinese/English interface, to ensure easy setup for each function.
- ▶ Up to 99 groups of processing parameters can be stored, which greatly saves the adjustment time and materials waste.

### Specification

| Model                     | RSM-WS-745                            |
|---------------------------|---------------------------------------|
| Stripping Length          | 0-45mm                                |
| Stripping Length Accuracy | 0.01mm                                |
| Cutting O.D.              | 0.5-7mm                               |
| Cutting Depth Accuracy    | 0.01mm                                |
| Max. Stripping Layers     | 4 layers                              |
| Power                     | 300W                                  |
| Voltage                   | AC220V/110V 50/60HZ                   |
| Applied Blades            | 2 pcs                                 |
| Memories                  | 99 processing data                    |
| Productivity              | 750-1150 pcs/h (depends on wire O.D.) |
| Weight                    | 13.8kg                                |
| Dimension                 | 495mm*138mm*260mm                     |
